NAME OF THE ACTIVITY: Improve your ICT skills!

Activity nr.: 2 / ICT based learning

Content	Skills	Competencies
Components of ICT	- Use of ICT skills, brainstorming, digital skills, presentation skills	- Team working, communicating, cooperative learning

Activity Overview

AFFINITY MATRIX	
General Description	With the help of this exercise, participants will not only become familiar with all the main components of ICT and their implementation in teaching-learning environment, but it will also give educators insights on ICT components they have to work more and put more focus on in the future and which one(s) are already well known amongst students.
Materials	Computer, ppt slides to present, big enough and quiet classroom for all the participants.
Duration	90 - 120 minutes
Feasibility	The activity is feasible for individuals (if not possible, alternatively for groups as well), preferably in class.

Activity

To implement all of the three components of ICT in one task, trainees should do

1) research a topic of their own choice (this covers the basic ICT skills). They should search websites and other internet sources in order to collect as much data as possible. For this part of the task, they have 30 minutes. Afterwards, they should

2) make a virtual presentation of their findings (which covers the advanced ICT skills). For this part of the task, they can use different platforms (such as PowerPoint, Canva etc.).They get 40 minutes for this step. Lastly, they should

3) present the presentation to their classmates (this would stand for the third component of ICT). Each participant (or group) has 5 minutes for their presentation.

Suggestion for the activity

After the presentation of each participant (or group of participants), encourage a discussion, where participants should share with which part of the task they had the most difficulties with and why.
